

Robotic Process Automation

ROBOTIC PROCESS AUTOMATION TRAINING

Target Audience:

Content:

1. Introduction to RPA developer Course

Meet the UIPath platform.

What is Business Process.

2. Variables,DataTypes,ControlFlow

Variables & Arguments

Data Types

If Statement

Loops

Switches

3. Data Manipulation

- Variables & Arguments
- Data Types
- If Statement
- Loops
- Switches
- Strings
 - Lists
 - Dictionaries
- RegEx Builder

4. Excel and DataTables

- What are DataTables?
- DataTable Activities
- 4.3 Workbooks & Common Activities
- Excel Application Scope & Specific Activities

5. UI Interactions

- Input Actions & Methods
- Output Actions & Methods
- Working with UI Elements

6. Selectors

- The UI Explorer
- Types of Selectors
- Fine Tuning
- Managing Difficult Situations

7. Project Organization

- How to choose the best project layout?
- How to break down a complex process?
- How to reuse parts of project?
- How to manage versions of the same project?
- How to prevent and solve exceptions?

8. Error & Exception Handling

- 8.1 Common Exceptions
- Try Catch
- Retry Scope
- ContinueOnError Property
- Global Exception Handler

9. Debugging

- Debugging
- Good case practices

10. Orchestrator for Developers

- Introduction of Orchestrator
- Orchestrator Overview

- Robots and Environments in Orchestrator
- Process Execution in Orchestrator

11. Introduction to Robotic Enterprise Framework

- Transaction Processing
- The ReFramework
- Dispatcher and Performer
- Dispatcher & ReFramework Performer Demo
